Re: Hot water expansion tank.

Dear Joe,

Thank you for the opportunity to quote.

We propose to furnish the necessary labor, material, and supervision required to check condition and operation of the heating hot water expansion tank and glycol pump.

Our proposal is based on the following:

1. Isolate expansion tank.
2. Drain pressure from tank into glycol barrel.
3. Test tank air pressure, adjust if required and bladder ok. Quote new if bladder bad.
4. Turn tank back on to system.
5. Check operation of glycol tank and pump.

Our proposal excludes the following:

1. Parts or materials not herein listed.
2. Labor to replace parts or materials not here in listed.
3. Permits or fees.

Breakdown:

Labor 4 hours @ \$150.00 per hour	\$600.00
Van charge	\$50.00
Material.	\$125.00

This appears to be a glycol system. The pump range is set for 20-30 psi. System is now at 40 psi. The domestic water PRV would normally be just for preliminary start or emergencies. As the valves are configured at this time.

The above can be completed for the sum of \$775.00 plus any applicable taxes.

Please sign where indicated, confirming your acceptance of the above listed work. Kindly fax the signed acceptance to our office, including your Purchase Order Number.

If you should have any questions or require additional information on the above, please do not hesitate to contact us.

Authorized Signature: _____ Date: _____

Purchase order: _____

Yours Truly,
David Hinnrichs
