Refrigerant Added:	Qty	lb	oz	TYPE
Refrigerant Removed:	Qty	lb	oz	TYPE

☐ Leak Tested

☐ Leak Found

☐ Leak Repaired

Method: _____

Total Charge: _____

WORK PERFORMED/UNIT INFO.

Arrived on site, checked in with customer. Set ladder up and then took all the tools i needed to the roof> took panel off to get the the service ports and electrical panel. Hooked up gauges and the tried putting in nitrogen. It would not go in due to the solenoid valves through out the system. So i called tech support and waited a long time for them to get back to me but they still did not get the valves open by the code they gave me to put into the board. I had a call from another coworker and he was needing some info from me and he said he had an a code for another unit if i wanted to try it and i used it and it worked. I then charged the system up with nitrogen and started leak checking the system. I ended up finding the leak on a flared fitting where the heads line

set was hooked to the condenser. I fixed the leak and then pressurized the system again with nitrogen and did not find anymore leaks. Let the nitrogen out and then started pulling vacuum. I found i did not have enough freon so i left the unit on vacuum over night and told client i would be back first thing in the morning.
