

Hot water tank relief valve seems to be discharging a significant amount of water on a fairly regular basis. Floor area around the base of the unit has remained wet for a long time and water can be seen dripping from the down tube.

Proposal to provide and perform the following:

- Remove existing expansion tank and relief valve
- Supply new Model T-12 expansion tank
- Supply new Model NCLX-5LS ¾" long shank T&P relief valve
- Install new expansion tank and relief valve
