SOFTWARE	E-COR-V8 Entrapass Corporate edition Software. EntraPass Corporate Edition is a multiple workstation software platform that offers the ultimate balance between power and affordability in a network environment. It offers the flexibility to securely connect controllers directly on the network, as well as over RS-485. EntraPass software is compatible with Kantech IP devices such as KT-400/ KT-1 controllers and Kantech IP Link (KT-IP) which all utilize 128-bit AES encryption to protect communication against compromise.	1	1,122.00	1,122.00

ACCESS CONTR...	KT-400 Expansion Kit. KT-400 is an Ethernet-ready four-door controller that provides 128-bit AES encrypted communication with the EntraPass system and is a highly secure solution for any security-conscious business. KT-400 can easily be integrated into an existing EntraPass system with other Kantech controllers (KT-100 and KT-300) or can provide the foundation for a brand new security installation. With an onboard Ethernet port, an external IP device is no longer required to connect to the network. The onboard port is dual-sensing, which means the system senses whether the connection is 10Base-T or 100Base-T, and adjusts automatically for faster connectivity. KT-400 manages network polling and communicates with the EntraPass Gateway only when an event has occurred. Communication integrity is ensured through a heartbeat signal which is sent at regular intervals to the EntraPass system. This asynchronous communication significantly reduces the amount of bandwidth required to manage the access control system over the network.	2	2,946.00	5,892.00

CARD READER	<p>HID Contactless Smart Readers. HID Global's pivCLASS Government Solutions enable facilities to upgrade their existing physical access control systems (PACS) to achieve FIPS 201/FICAM compliance without the need to rip-and-replace their existing system. The RK40 and RPK40 are designed to support multiple use cases leading to full FICAM compliance. Transitional reader – in this approach the reader can be used standalone to read legacy iCLASS and HID prox cards as well as FIPS 201 type cards and pass the card identifier directly to the panel. The key pad can be used to send a user entered PIN directly to the PACS panel. When used with the pivCLASS Registration Engine and Certification Manager software this approach provides a solution for a smooth transition to full FICAM compliance as well as a cost effective solution for "Uncontrolled" doors where access control is desired but FICAM compliance is not required.</p>	7	444.00	3,108.00
