## PRODUCT DESCRIPTION

LED universal mount floodlights project a bright, clean light and reach full brightness instantly. They use LED lamps, which last longer and use significantly less energy than universal mount floodlights with other lamp types, such as high-pressure sodium or compact fluorescent. They also produce very little heat and can withstand temperature changes and humidity. These outdoor lighting fixtures are commonly used to replace traditional floodlights in a variety of commercial applications.Universal mount floodlights are outdoor lighting fixtures that project a bright, high-intensity light over a widespread area to increase visibility. They can be mounted on walls, ceilings, poles, or the ground. They are typically one of several floodlights used to illuminate sports fields, parks, building exteriors, and industrial yards.
