We were asked to provide a quote for your boilers, Model KBN 501 (D12H10214648 and K12H10211228). Our technician made the following notes:					
When I arrived both boilers were locked out for different codes, left weather locked out for low water cut off and flow. Right boiler was locked out for MHR indicating flow as well. And going through system found system with 0 PSI is full hydronic system. Then proceeded to clean screen in water makeup. And reassemble system fed water then started trickling out rapidly out of right boiler pressure relief. Shut down valves to right boiler. Left boiler is able to keep up at this time. Spoke with Gabby she talked to her project manager and would like a quote for both relief valves to be changed and cleaning both boilers as well.					
The pricing shown below covers labor, materials and applicable taxes to do this work as well as TIME SPENT on October 22. Please call me at extension #236 if you have any questions. Thank you.					
*** This means the NTE needs to be increased from \$450.00 to \$2,673.24. Thanks again. ***
