Description of Repairs	Checked in with head sgt. of vehicle bay. The door was working fine when S&S arrived. Talked to mechanic about the bay door issue, he informed S&S that the motor would sometimes keep running after it was closed but not when going up. S&S got a ladder to look at the motor, gears and controls. Motor up top checked good, everything was functioning correctly. S&S tested the door about 20 times to see if issue could be recreated, but the door was working fine. S&S checked controls and relay switches. The only thing that could have happened was maybe the gear switch-over chain was catching "sometimes" causing the motor to keep free spinning. No issues to report at this time. Work complete.							
Diagnosis: Initial Work Order	One of the overhead doors is not working properly, furthest to the right when standing outside.

Description

WO#: 15662

CSS Ticket Number: 33741

Problem: One of the overhead doors is not working properly. It will stop closing at random times and the motor is making some uncommon noises. It will start running when the button is depressed again but has stopped at times. The door is the furthest to the right when standing outside and looking at the shop.
