Dear Mr Bradford ,

We, at Southern Air, Inc., would like to provide you with the following quote as detailed below.

Found on service call CSS#14342, we need to replace the 1in copper pipe that is run to the toilet and tee off down to the cold water side of the sink. We also need to replace the 1/2 copper pipe for the sink. We will install 1in pex tubing from the shut off valve to the toilet and tee off of it with a piece of 1/2in pex tubing and run it between the walls down to a new shut off valve designed for pex tubing and reuse the supply from the spicket to the valve. We will replace the old copper hot water line going to the sink. We will install 1/2 in pex tubing from the existing shut off valve to the hot water side of the sink spicket. We will install a new water valve under the sink designed for pex tubing and reuse the supply line up to the spicket. We will probably need to cut another hole in the wall at the toilet to get the toilet valve hook up. The total for this job will be \$1892.35. \*\* Take off the 1st service call charges per George Grant 7-24-18\*\*

Labor: 2 men 8 hours each \$1520.00 total
