	cycling at 36degrees but doesn't come back on until 45degrees. Found thermostat no good. Provided estimate to customer, estimate was approved.				
	JWM 6/25/20 Returned to job, unplugged cooler and removed evap panel. Removed bulb from evap coil. Disconnected electrical to thermostat. Installed new thermostat and mounted bulb in evap coil. Mounted new control secured all panels and plugged in. Watched box pull temp and monitored. Found control cycled off at 36degrees and cycles back on at 41 degrees. Watched again and found same temps. Found no further issues.				
	Manufacturer: Continental Model: 2R Serial: 154C4815
