Risk Code	Safety Risk	Comments	USD
Description	1-45015540751	Scope of Work: Konecranes to supply labor and material to replace the hoist motor coupling and inspect the motor and input shaft splines	3,778.27
Fault Recommendation	Hoisting coupling - internal Worn material Replace	Parts ONLY(S&H Included): \$882.27  Labor Cost: \$2896.00  Lead Time: 4-5 Weeks  -Following a recent review of our records we have identified that your lifting equipment may now be due for its hoist coupling change.  This safety critical component requires an inspection and lubrication every 5 years if your hoist doesn't have a CID (ControlPro) Unit or every 8 years if your hoist does have a CID unit.  This is reduced if the hoist operates in temperatures outside of -10 to 40+ Celsius (104F) or more.  The hoist coupling is a critical load-bearing component that, subject to usage and environmental conditions, will wear, which if not inspected or replaced at the recommended intervals, could result in a catastrophic load drop failure.  Hoisting coupling inspection/replacement interval of 8 years has been reached 1301 days ago based on service history of the hoist. Hoisting coupling should be inspected/replaced. Estimation is based on following: Hoist includes condition monitoring unit and previous coupling inspection/replacement or start of use has been over 8 years ago. Hoist serial number: HMW29938. Hoist model information: SX50410100P55FDL0S.
