

Lower circulating pump leaking and spraying water all over. Pump has been turned off. Repair circulating pump to eliminate leak. Lead/lag should have taken over automatically when leaking pump was isolated but didn't. Had to manually switch over to other pump with override and system now running in "hand" position. Assess and repair issue with automatic transition from one to the other in auto mode. Repair issue with Navien on-demand water heaters. Only getting lukewarm water from the hot side of the taps.

Proposal to provide and perform the following:

- Replace bearing assembly, coupler and motor mount
