CSS# 94237 WO# 13418

Description of Repairs

Powered down unit. Removed the old pcb board and condenser fan motor and replaced with new, powered up both the condenser and head unit and started to run, after 5 minutes the condenser shut down and error ch5 again, came up. Checked all wiring and was in the correct spots. Called tech support and went through the entire unit, checking board, motor, compressor, coils, and eev. Found the eev has bad readings and that is what took out the original board.
