WORK PERFORMED

Date Description

7/25/2024 Pick up materials from the office. Check in and start taking the unit above the ceiling apart. Cut a hole in the bottom to access bearing. Take belt and sheave off. Remove bearing collar and bearing would not move. Take screws out of bearing housing bracket but they had nuts behind. Remove and replace bearing. Install 1/4-20 nutserts to reinstall bracket. Install bracket. Cut hole in back side of unit bottom to access rear bearing. Remove bearing collar and bearing. Clean up and I will return tomorrow to finish.

7/26/2024 Check in and set up. Install rear bearing into bracket and install bracket. Adjust bearings. Install and adjust sheave on motor side. Reinstall belt and check operation. All ok. Turn back off and repair access holes with sheet metal. Put unit back together and check operation. Clean area.

WORK PERFORMED

Date Description

7/30/2024 Unit locked out. Call tech support to unlock. Unit is password protected. Unlocked unit and found it has a bad temp sensor reading 580 degrees. Get quote for a new sensor. Go through startup with tech support for proper readings and settings. Use bypass switches to set fan and gas settings. Unit is reset for now but will go into lockout again during a call for heat with the bad temp sensor. It will think it is overheating and will lock out.
