Refrigerant Removed:	Qty	lb	oz	TYPE

WORK PERFORMED/UNIT INFO.

Arrived on site, checked in with customer. Went to the unit and started looking at unit to see where the leak was and found it in the coil itself and could not be repaired. I then went to the supply house and got the valve needed to install and completely shut off the water supplying coil. Came back and cut the piping and then cleaned up and cut off some to make up for the valve going in. then took the piping loose from the coil and put two elbows in to make the loop. I turned the water on and made sure nothing was leaking. Then noticed that the actuator valve was not working and letting the water stand still in the coil and that is what cause it to freeze and bust. I took the actuator motor off the valve and opened it manually so it would have water
