WORK PERFORMED/UNIT INFO.

Got on site and checked in with customer. Went to the boiler room and started replacing the DHW booster pump. Got it out, and the new one installed. Turned valves back on for it and leak checked it, all looked good. Wired it back up and then turned it on. Bled some air off of it by opening up the closest HW spigot. All looked good on it. Still need a HW tank circulator pump though for the domestic hot water to work. I quoted a new pump for that. Packed up tools, did all my paperwork, and then left when finished.
