☐ Leak Repaired

Method: _____

Total Charge: _____

WORK PERFORMED/UNIT INFO.

Arrived on site. Had to wait till client arrived to let me in. Once I got in he showed me the controller. I looked up the codes and it was compressor unit running and condenser fan signal loose. I then went out to the condenser and ohmed out the compressors and fan motors. All of them checked out good. I then checked the pressures and found that the system was flat on freon. It seems that every time i get a service call here that the unit is always flat on gas. Highly recommend to replace the system due to all the problems they have had out of these units. I then called and told Reginal what i had found and he said to quote out to repair the system. I then put panels back on units and done paper work.
