**WORK PERFORMED/UNIT INFO.**

Arrived on site, checked in with customer. Went to boiler room and seen that there was hot water going through out the system. Then went inside the building and seen it was cold. I did not here any air flow in the building either. Went to the roof and found that the IPAK was off on fan failure and client was up there with me and said that they had a phase go out due to a transformer on a pole behind facility. I omhed out the supply fan and got 1.5 omhs across all three legs. Then went and reset the unit and waited for it to start running and it did. Client said that there was a fault on a boiler also so i went back to the boiler room and looked up the code and found that the sensor for the low water cut out was what the code was. I tested the sensor and it was open and
