Opening Comment

Performed scheduled service visit.

During this visit three water samples were obtained from underground wells for lab analysis.

Makeup Water

Online 

Makeup water is analyzed in order to determine cycles of concentration and to set program control parameters.

Cooling Tower

Offline 

Cooling Tower was idle during service. Patrick indicated that the tower has not been running since it has been filled. Testing found low levels in the cooling tower. Levels will rise as the system operates. Reviewed controller programming and filled tanks as needed.

Dual Temp Glycol System

Online 

Testing found all levels within desired ranges indicating good corrosion protection by the chemical treatment at this time.
